

Pixel & Flow — Creative Studio Website

Project 2 | Responsive Web Layout | DecodeLabs Industrial Training | Batch 2026

Project Overview

Pixel & Flow is a fully responsive creative studio website built as **Project 2** of the DecodeLabs Industrial Training Program (Batch 2026). The goal of this project is to demonstrate mastery of **responsive web design** using pure HTML and CSS — ensuring the website looks great on every screen size, from mobile phones to large desktop monitors.

Project Goal

Build a responsive webpage that works across different screen sizes using CSS media queries, responsive navigation, and proper spacing and alignment.

Project Structure

```
project-2/
|
├── index.html    # Main HTML file (all code in one file)
├── style.css
└── README.md     # Project documentation
```

Implementation Checklist

Feature	Status
Viewport Meta Tag (width=device-width)	 Done
Mobile-First Base CSS	 Done
CSS Flexbox for components	 Done
Responsive Navigation	 Done
Hamburger Menu (mobile)	 Done
Media Query — Tablet (768px)	 Done

Feature	Status
Media Query — Desktop (1024px)	✅ Done
Proper Spacing and Alignment	✅ Done
Marquee / Scrolling Banner	✅ Done
Accessible Touch Targets (44px+)	✅ Done

Responsive Breakpoints

Screen	Breakpoint	Layout
Mobile	Default (0px+)	Single column, hamburger menu
Tablet	max-width: 768px	2 columns, stacked footer
Desktop	min-width: 1024px	3 columns, full navbar

Key Concepts Used

1. Viewport Meta Tag

```
<meta name="viewport" content="width=device-width, initial-scale=1.0">
```

This is the "Key to the Kingdom" — without it, mobile browsers use a fake 980px viewport.

2. Mobile-First CSS

All base styles are written for mobile. Larger screens are handled with @media queries on top.

3. Flexbox Layout

Used for navbar, hero buttons, service cards, work grid, testimonials, and footer.

```
.services-grid {
  display: flex;
  flex-wrap: wrap;
  gap: 20px;
```

```
}
```

4. CSS Media Queries

```
/* Tablet and below */
```

```
@media (max-width: 768px) {  
  .service-card { width: 100%; }  
  .nav-pages { display: none; }  
  .burger-btn { display: flex; }  
}
```

```
/* Desktop */
```

```
@media (min-width: 1024px) {  
  .service-card { width: 30%; }  
}
```

5. Hamburger Navigation (JavaScript)

Mobile navigation using a toggle button that shows/hides the mobile menu drawer.

Sections in the Website

1. **Navbar** — Fixed top navigation with logo, links, and hamburger for mobile
2. **Mobile Menu** — Full-width dropdown that appears on burger click
3. **Hero** — Full-screen landing section with title, description, CTA buttons, and stats
4. **Marquee** — Scrolling skills banner using CSS animation
5. **Services** — 6 service cards in a responsive flex grid
6. **Work** — 4 project showcase cards in a responsive grid
7. **Process** — 5-step numbered process list
8. **Testimonials** — 3 client review cards
9. **CTA** — Call to action section with dark background
10. **Footer** — Multi-column footer with links and social icons

Technologies Used

Technology	Purpose
HTML5	Page structure and semantic markup
CSS3	Styling, layout, animations
Flexbox	Responsive grid layouts
CSS Media Queries	Breakpoints for different screens
CSS Animations	Marquee scrolling effect
JavaScript (Vanilla)	Hamburger menu toggle
Google Fonts	Open Sans + Poppins typography

How to Run

1. Download or clone this project
2. Open index.html in any web browser
3. No installations or dependencies required
4. Resize the browser window to test responsiveness

Screenshots / Preview

Device	Description
Mobile (360px)	Single column layout, hamburger menu visible
